WHO WE ARE:

Lyndon Systems started as a family-run business with just two employees in 2002. Since then, the company has developed into a specialist service provider and innovator in the LGV accessory and conversion sector of the fleet and automotive trade market.

Delivering reliable, forward-thinking technology solutions designed to support modern business, Lyndon Systems have established a reputation as a specialised van converter, allowing for a number of tailored conversions to take place with us.

TYPE APPROVAL:

Customer specified equipment is often added to goods vehicles before they are registered and supplied to the customer. Modifications to a vehicle prior to the registration could invalidate the European Community Whole Vehicle Type Approval and therefore require a new Type Approval or an IVA to register the modified vehicle. The N1 Enhancement Scheme allows enterprises who are responsible for the complete enhancement process, such as vehicle dealers and commercial vehicle body-builders to apply for and receive an IVA; for qualification, the enterprise needs to obtain CoP clearance to demonstrate the use of suitable production processes, procedures, controls and documentation, along with sub, it documentation and a modified vehicle for inspection to show that the enhancements fitted to the vehicle and their whole enhancement process are in compliance with the required national standards. Upon a successful outcome, the VCA issues a report confirming the modifications are acceptable as part of the N1 enhancement scheme and allocates an IVA number for the vehicle that can be used for vehicle registration purposes, which is conducted electronically.
